## PROJECTS

### SurplusBite — [Surplus food marketplace, Flutter](#)

Flutter, Dart, Firebase, Riverpod, Cloudinary

**Install:** Android APK (58 MB) — [Google Drive](#)

- Atomic Firestore transactions reserve stock, so two buyers claiming the last portion cannot both win, and a cancellation restores it exactly once.
- Firestore security rules validated by 66 emulator tests, blocking abuse cases such as a buyer editing listing stock or posting a duplicate review.
- Listing and order updates stream straight from Firestore, so the app shows stock changes with zero polling.
- Riverpod dependency injection and immutable models let the whole app be tested against fake services with no Firebase project. Email/password and Google sign-in, Cloudinary uploads.

### Task Flow — [Kanban project management](#)

React.js, Node.js, Express.js, TypeScript, MongoDB, Tailwind CSS

- A high-throughput REST API over an indexed MongoDB schema, holding 200+ requests per minute under concurrent load.
- TypeScript across frontend and backend, so mismatched data shapes fail at compile time instead of in production.
- Stateless JWT sessions with Bcrypt hashing, and custom auth guards on 100% of state-changing routes.
